

Theoretical Chemistry Symposium

9 - 12th December 2010

The Theoretical Chemistry Symposium (TCS) is a biennial symposium focusing on various fields of theoretical and computational chemistry. The field of theoretical and computational chemistry is a rapidly growing field and the boundaries of the field are constantly being pushed due to the large quantum of work in this area. TCS is the largest meeting of theoretical chemistry in India and is characterized by many insightful talks, posters and intense discussions. The Department of Chemistry, IIT Kanpur, hosted the 12th TCS (TCS10). The symposium lasted for 4 days. About 275 participants attended the school, including faculty, post-docs and students from India and abroad. The four days of academic sessions were packed with high-quality talks and poster presentations. Several recognized theoretical chemists from India and some invited speakers from other countries attended the meeting. There were a total of 42 speakers and about 150 poster presenters. In addition to the academic sessions, there was a special felicitation session one evening and a cultural program during another evening.

The entire program along with photographs can be viewed at <http://www.iitk.ac.in/chm/tcs>.
