v 1.3

Sat Sep 3 18:13:32 2011

"cond" is changed to "conditional" in the syntax.

v 1.2

Fri Sep 2 21:24:25 2011

"local" is changed to "localvar" in the syntax.

v 1.1

Sun Aug 28 10:18:25 2011

Major Change: record syntax has been changed to conform to the Unification Code. The unification procedure expects syntax of the following form:

```
[record literal(tree)
        [[literal(key) ident(k)]
         [literal(left) ident(t1)]
         [literal(right) ident(t2)]]]
```

instead of

```
[record literal(tree)
        [literal(key)#ident(k)
         literal(left)#ident(t1)
         literal(right)#ident(t2)]]
```

v 1.0

- In Question 1, [skip] is replaced by [nop]. This is done to avoid Oz keywords in the new language as far as possible.

- In Question 2, variables are now in lower case, identified as variables purely through "ident". Also, skip is replaced with nop as in Question 1.

- From Question 3 onwards, variables are now in lower case.

- In Question 7, the syntax of subr has been corrected to be consistent with the previous syntax.

- Some stub code to demonstrate Dictionary usage has been added in Section 3.
