

From the bottom of my heart I feel grateful to ...

- students of IIT Kanpur for their appreciation of my teaching. It is always a privilege for me to teach my favorite topic (data structures and algorithms) to the best students of my country. With their encouragement, I hope to become a good teacher someday.
- my colleagues at IIT Kanpur for their encouragement, tolerance, helpfulness, and largeheartedness. I truly admire the democratic and transparent culture of my department that gives full freedom for personal as well as professional growth. Every faculty meeting makes me realize that there is so much to learn from the wisdom of my colleagues. My stay at IITK would not have been so congenial without the help and support of my colleagues.
- my teachers at IIT Delhi who introduced me to the beautiful world of theoretical computer science.
- my PhD supervisor for his guidance and help at every front of my life.
- Max Planck Institute of Computer Science for giving me wonderful years of research in algorithms after my PhD.
- my research collaborators, not only for a perfect team work and the results we got together, but also for their brilliance, modesty, and passion for research.
- my friends and parents for their love and support and having faith in my abilities even when I was in doubt.
- my soul-mate Deep Shikha for her love, dedication, and support. Without her, I can not imagine my life.
- so many people who directly or indirectly helped me on countless occasions when I was in need.

I am unable to find a reason for all these beautiful gifts that I have received from the world. I also realize that I have not done anything special that could make me more deserving than those who are unfortunately not getting all this. I really wonder at this amazing fact of my life.
